

THE JAR CARD

1. In jars A and B, have your child color some pieces yellow and some green. (All pieces don't have to be colored.) Then, put an X under the jar where the fly will have the better chance of landing on yellow candy.
2. Ask your child what fraction is represented in each jar, with the yellow always being the numerator.
3. Write a fraction in the boxes under the jars. Have your child color in pieces of candy to represent the fractions.
